

create a winning team

Think for a moment about an Ocean sailing yacht. The skipper wants the boat to go faster - to beat the competition, however, the boat alone cannot achieve this task; you need a person to trim the sails, to make sure they catch all the wind. You also require a navigator to make sure you are heading in the right direction and surely a cook to make sure the team is fed?

These are all important cogs in a gearbox, each one as important as the other...and, like an engine, if one cog breaks the mechanism fails - it's as simple as that.

When considering any additional service for your business you may wish to ask 'Does it make our Boat go any Faster?'

The idea or service alone will not...but, with the right implementation, commitment and support it can be a winning advantage.

Our services

Computer Hardware Supply

We supply the very latest in quality Hardware systems specialising in Hewlett Packard, Toshiba and IBM.

Computer Software Supply

We supply many forms of Computer Software ranging from Microsoft Products, Networking applications, Accounting and administration packages to bespoke software design and implementation. We are a Sage Line 50 Partner.

Hardware and Software Maintenance Contracts

Annual maintenance contracts ranging from 4 hour response contracts backed by our own team of Microsoft qualified professionals both 'office based' and 'on the road'.

IT Managers

We can supply your very own IT managers who can operate seamlessly within your organisation for a minimum of _ a day per quarter or up to 3 days per week.

Training

We can provide group or one-to-one training at your desk or alternatively at our offices. Our training courses can be tailored to meet your exact requirements.

Network Architecture and Fault Analysis

The ability to design and implement a professional networking topology based on your specific requirements. This is supported by our own Network analyser, which can monitor networks and identify problems down to protocol level.

Cabling Infrastructure

We can supply and professionally install a range of cabling systems to suit your business needs, implemented with the latest cabling technology available and

taking into consideration the next fifteen years of predicted speed growth.

Disaster Planning and Management Strategies

Our approach is to ensure security is adopted throughout your organisation and as such disaster management can range from simple backup devices to utilising extensive off-site duplication systems.

Security

We provide a range of high performance security applications to ensure your IT system is secure. This includes 2 factor and 3 factor security solutions. We use this type of system ourselves so a demonstration can be easily arranged.

Web Design and Development

We can provide a fully functional up to the minute Website tailored to your needs and install this along with Content Management software which is intuitive and easy to use. This enables you to keep your own site up to date with articles, news and images for your clients and customers.

Internet Service Provider Facilities & Management

We can provide a variety of E-Mail accounts, ranging from single dial up accounts to ADSL, SDSL and Leased Lines.

Consultancy & Outsourcing

Our consultancy is based on professional advice actively geared towards evolving technology and encompassing the best of today's facilities and keeping a close eye on future developments. We can offer all levels of professional consultancy

and outsourcing, from overseeing complex projects to implementing small systems.

Anti Virus and Spam control

We can provide a variety of anti virus and anti spam solutions to suit your business. These range from products installed in-house to products hosted externally to ensure nothing unwanted gets past the gatekeeper into your system.

Remote Working

We can provide professional solutions for remote working, from simple PDA devices that automatically receive emails to more secure and advanced systems that let you work as if you were sitting in the office, but from almost anywhere in the world.
